

Help Us, Heal More

Animal Care Assistance Program by PulseVet Technologies

pulsevet.com

If you are a rescue/shelter organization OR veterinary clinic and you are aware of an animal that may benefit from the latest in proven veterinary modalities, *WE WANT TO HEAR FROM YOU*

As part of our **Animal Care Assistance Program**, PulseVet contributes to the medical care of animals with traumatic injuries/wounds that require access to the latest in veterinary therapies they may not receive otherwise. We frequently work with veterinarians to determine if our technologies can help and offer pro bono treatments, whenever possible.

Our VersaTron shock wave sound energy and ProTec Platelet-Rich Plasma (PRP) therapies are noninvasive technologies for healing bone fractures, wounds and tendon/ligament injuries. Thousands of horses and dogs have benefited from these therapies, like:

- **Trigger, an 8-year old Paint gelding with a severe “degloving” laceration** that exposed 75% of his dorsal cannon bone and severed his tendons. Trigger was transported to “Save the Horses” rescue and with the help of our VersaTron shock wave therapy, Trigger showed remarkable improvement in three months, making skin grafts unnecessary.

- **Petey, a stray Pit Bull Terrier rescue with a severe leg wound**, suspected from a cable wrapped around his leg. Amputation was being considered, when PulseVet assisted the team at Animal First Foundation of Texas and offered VersaTron shock wave therapy. Petey was completely healed, fully weight-bearing and was adopted shortly thereafter!

Please email us at info@pulsevet.com if you would like us to consider a case and feel free to forward this information on to your local shelter or rescue organization.
