

SOUND TALES

Brought to you by VersaTron[®] shock wave therapy

"My 20-year old Irish Sport horse suffered a suspensory injury last August coming off of a large jump. After 5 sessions of shock wave we are now trotting! We are ahead of the vet's prediction by about 3-4 months. I am positive the shock wave treatments were a part of the rapid recovery on my old boy. While he may not do the big jumps again he certainly will be able to be ridden and jump around some smaller things. I would use shock wave treatment again for sure." *C. Bileddo - Illinois*
